FEEDBACK NEEDED ON STORMWATER DRAINAGE AND LAKE LEVEL STUDY

The City of Burnsville is currently working on a Stormwater System Modeling and Analysis Study. This study will help determine any areas within the City's storm sewer/drainage system that may need updating, and help identify any potential problems.

The study will consist of three phases taking place throughout 2019 – 2020:

- Creating new Storm Sewer System Model
- Reviewing High Flood Risk Areas
- Reviewing Lake Levels

Provide Feedback

As part of this study, the City is asking residents and businesses to help “crowd-source” information about drainage issues in Burnsville. Please note that the information will be used to help validate stormwater models, and improvements may not be made to all areas.

Residents are encouraged to visit www.burnsvillemn.gov/stormwaterstudy to view an interactive map and mark/provide feedback about areas with known drainage problems and flooding.

For more information or with questions about the study contact Burnsville City Engineer Jen Desrude at jen.desrude@burnsvillemn.gov or 952-895-4544.
